98%

CAD likely - High risk tier

Expected stenotic vessels: 1.2 of 3 - Model reliability: High (hold-out AUC 0.90)

Model estimate: CAD likely (98%, High tier), with about 1.2 of 3 main arteries expected to be narrowed. The estimate is raised mainly by typical chest pain and fasting blood sugar 122 mg/dL; lowered by EF-TTE 55 %.

LAD 77%
Stenosis likely (threshold 47%). Reliability: Moderate.

LCX 22%
Below threshold (threshold 29%). Reliability: Moderate.

RCA 23%
Below threshold (threshold 28%). Reliability: Limited.

Colour = calibrated probability of >=50% stenosis; outline = at/above threshold. Whole-vessel estimates: no lesion location.

Patient summary (changed and key fields)

Measurement	Value	Measurement	Value
Age	54 years	HDL cholesterol	27 mg/dL
Weight	70 kg	Blood urea nitrogen	11 mg/dL
Height	170 cm	ESR	27 mm/h
Sex	Female	Haemoglobin	12 g/dL
BMI	24.2 kg/m2	Potassium	4 mEq/L
Hypertension	No	Sodium	138 mEq/L
Obesity	No	White blood cells	6,900 cells/uL
Dyslipidaemia	Yes	Lymphocytes	37 %
Systolic blood pressure	120 mmHg	Neutrophils	58 %
Pulse rate	80 bpm	Platelets	218 x103/uL
Functional class	Class 2	EF-TTE (ejection fraction)	55 %
Q wave	Yes	Valvular heart disease	None
Fasting blood sugar	122 mg/dL	Current smoker	No
Creatinine	0.9 mg/dL	Diabetes mellitus	No
Triglycerides	100 mg/dL	Typical chest pain	Yes
LDL cholesterol	88 mg/dL	Atypical chest pain	No

Top-5 drivers per estimate (SHAP, probability points)

CAD (98%): Typical chest pain = Yes +9 pts; EF-TTE (ejection fraction) = 55 % -6 pts; Fasting blood sugar = 122 mg/dL +5 pts; Atypical chest pain = No +5 pts; ESR = 27 mm/h +4 pts

For decision support and educational purposes only. Not a substitute for formal diagnostic imaging or clinical judgement.

LAD (77%): Q wave = Yes +6 pts; Typical chest pain = Yes +5 pts; EF-TTE (ejection fraction) = 55 % -5 pts; Atypical chest pain = No +3 pts; Regional wall-motion abnormality = 0 -3 pts

LCX (22%): Age = 54 years -8 pts; Creatinine = 0.9 mg/dL -6 pts; Platelets = 218 x103/uL -5 pts; Sodium = 138 mEq/L -4 pts; EF-TTE (ejection fraction) = 55 % -3 pts

RCA (23%): Diabetes mellitus = No -9 pts; ESR = 27 mm/h +5 pts; Lymphocytes = 37 % -3 pts; Neutrophils = 58 % -3 pts; Age = 54 years -3 pts

Physiological breakdown (share of the CAD explanation)

Demographics 6% - Risk factors 9% - Examination & symptoms 39% - ECG 9% - Labs 23% - Echocardiography 15%

For decision support and educational purposes only. Not a substitute for formal diagnostic imaging or clinical judgement.
